

STATE OF THE INDUSTRY

As the first table illustrates, the share of manufacturing, represented by the secondary sector, has declined in Punjab. Similarly, since 2011-12, the rate of growth of this sector has reduced significantly. Data from the Annual Survey of Industries show that the number of factories in Punjab declined between 2010-11 and 2011-12 (latest figures). During the same period, the number of employees also fell by around 14,000
