Kochi to Implement Genesys International's Digital Twin Platform

Mumbai, April 11, 2025: Genesys International, has announced that the city of Kochi will now adopt its Digital Twin stack. This initiative, awarded by KIIFCON Pvt. Ltd. to the consortium between Genesys International and UL Technology Solutions, is valued at Rs. 9.13 crore and will cover all wards of Kochi Municipal Corporation.

As part of this project, Kochi will integrate advanced LiDAR data, high-resolution base maps, and a web-based GIS platform—creating a real-time, data-rich geospatial management system. This digital twin will empower city administrators with enhanced decision-making capabilities for infrastructure planning, utility management, and disaster response.

This development follows closely on the heels of a similar adoption in Hubli, Karnataka, where Genesys was recently awarded a Rs. 21.45 crore contract, underscoring the increasing momentum for digital twin adoption in Indian cities.

Commenting on this development, Mr. Sajid Malik, Chairman and Managing Director of Genesys International, said We are happy to see the rapid adoption of geospatial in our urban bodies and we believe India stands at the cusp of large success in the governance and citizen centric applications that are now possible. With more than 5000 urban bodies India represents one of the largest urban eco systems in the world.

Our digital twin platform is the result of years of deep expertise in high-precision mapping, LiDAR data integration, and real-time geospatial analytics. It is designed to provide city administrators with a powerful decision-support system—enabling proactive governance, efficient infrastructure planning, and better public service delivery.

This project reflects the growing recognition of Genesys as the go-to partner for cities looking to embrace the future of urban management.

The Genesys digital twin stack is a proprietary geospatial technology framework that combines 3D mapping, AI-driven analytics, and real-time integration, making it one of the most comprehensive urban intelligence platforms in the country.

This project marks another milestone in Genesys' mission to enable smart cities across India through advanced geospatial intelligence and digital transformation.
