### **Market Opportunity:**

According to Semiconductor Industry Association (SIA) “The global chip market is projected to grow substantially in 2021, 2022 and beyond as semiconductors become essential component to every aspect of electronic devices that are part of our daily life.”

Semiconductors are the key components in every electronic system that includes smartphones, personal computers, Laptops, Communication and networking systems, medical equipment and Automobiles. Emerging technologies and applications in the areas of 5G communications and Artificial intelligence are further fuelling the growth. Semiconductor industry will benefit from the ongoing innovation and development in connectivity, data centres, communications, automotive, safety & security, infotainment, navigation, home automation, wearable devices, etc. and will continue to see growth in the coming decades.

Moschip's solid foundation and track-record in taking both semiconductor and electronic products from specification to production and its unique capabilities in mixed-signal and high speed interface IP, positions the company to address the growth opportunities in semiconductor and ESDM sector. In addition, the recent announcement of silicon proven 8G high speed interface IP and other strategic initiatives helping the company to address emerging opportunities in the industry.
