**Abstract:** In the present study, the effect of the concentration of the polymer solution on the morphology of the polymer films was investigated. The polymer solution was prepared by dissolving the polymer in a solvent. The polymer solution was then cast onto a substrate and dried. The morphology of the polymer films was characterized by scanning electron microscopy (SEM). The results showed that the morphology of the polymer films changed with the concentration of the polymer solution. The polymer films with a higher concentration of the polymer solution had a smoother surface than the polymer films with a lower concentration of the polymer solution.
