Accedere Positions Itself as AI-Driven Cyber Compliance Leader Amid IT Sector Uncertainty

Recent market volatility in the IT sector has sparked concern over the long-term sustainability of traditional IT services, particularly amid growing speculation about the disruptive impact of artificial intelligence (AI). Several companies have experienced pressure as investors reassess growth models in a rapidly evolving technology landscape.

Amid this backdrop, **Accedere Ltd** is positioning itself at the intersection of cybersecurity, regulatory compliance, and AI innovation. Reflecting its sharpened strategic focus, the company recently rebranded from E.com Infotech India Ltd several years ago to Accedere Ltd, underscoring its transition from conventional IT services to advanced technology-driven solutions.

Launch of Controllo.ai: AI-Powered Cyber GRC Platform

At the center of Accedere's strategy is **Controllo.ai**, an AI-powered Cyber GRC (Governance, Risk, and Compliance) platform designed to streamline complex regulatory requirements.

The platform enables organizations to manage compliance obligations across multiple Indian regulatory frameworks, including:

- The Digital Personal Data Protection Act (DPDPA)
- SEBI's CSCRF
- RBI cybersecurity guidelines
- IRDAI regulations
- NCIIPC directives
- Aadhaar compliance requirements

Notably, the platform also integrates consent management functionality, a key requirement under the DPDPA framework.

Global Compliance Capabilities

Beyond Indian regulations, Controllo.ai accelerates compliance across major international standards and frameworks such as:

- ISO 27001
- SOC 2
- HIPAA
- NIS
- NIST
- GDPR
- CPRA
- UAE's NESAs and many others.

By embedding AI into evidence review and compliance validation, the platform significantly reduces manual effort traditionally required for certification and regulatory audits.

Addressing the Global Cyber Talent Shortage

With an acute global shortage of cybersecurity and privacy professionals, Controllo.ai aims to bridge capability gaps within organizations. Its AI engine, "Secura," functions as a virtual compliance consultant, evaluating documentation and evidence against regulatory requirements. This automation can save hundreds of man-hours, accelerate audit readiness, and help organizations avoid potentially heavy penalties arising from non-compliance.

According to the company, the platform delivers a return on investment within less than a year by reducing consulting costs and internal resource strain.

Leadership and Innovation

Controllo.ai has been developed under the leadership of Mr. Kunal Chaudhary, Director of Accedere Ltd. An IIT graduate with a BTech degree and a patent in AI, Chaudhary has spearheaded the company's AI-driven transformation.

Outlook: Preparing for DPDPA Deadlines

With the DPDPA rules announced in November 2025 and organizations given an 18-month compliance window, Accedere anticipates strong demand for automated compliance solutions. The company expects Controllo.ai to gain traction among enterprises seeking efficient, scalable, and AI-enabled compliance management tools.

As regulatory complexity intensifies and AI reshapes the technology landscape, Accedere's strategic pivot highlights how specialized, innovation-led firms may chart a resilient path forward in a changing IT environment.
